## SOUTHERN OUTLET HOUSE

---

■ VANTAGE® ALUMINIUM WINDOWS AND DOORS ALLOW THIS HOME UNOBSTRUCTED VIEWS OF THE SURROUNDING LANDSCAPE.

This unique home is located in the striking city of Launceston, Tasmania. Designed and built by the talented architect Philip M Dingemans, the core requirements of this home were to produce a climatically responsive and welcoming family home.

The north-east facing home was built purposefully, maximising the use of the land. The building is sited and planned to ensure the natural attributes of the location work within the constraints of the steep slope and a restrictive budget.

The floor plan of this home is quite limited, so Philip M Dingemans has cleverly designed the home to expand to the outdoors so the project has a sense of generosity in the public areas.

A key design element has been to draw the outdoor living space into the home. Local aluminium window and door supplier Glass Supplies provided the high quality, custom made windows and doors for this project to meet the brief of creating several open living spaces throughout this home.

VANTAGE® Series 542 D'Stacker sliding doors have been utilised to frame the outdoor terrace, creating an effective internal / external living space.

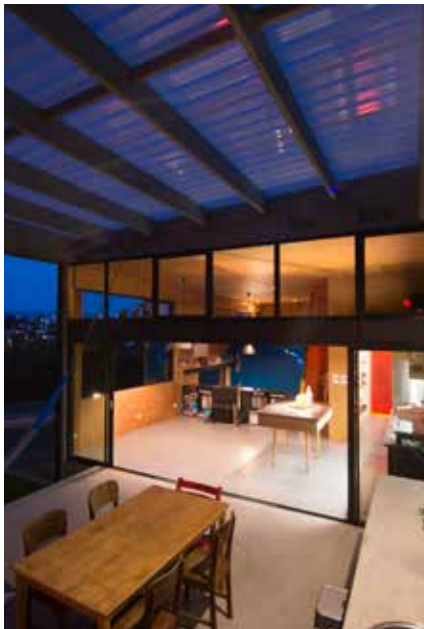

VANTAGE® Series 516 fixed windows have been used throughout living spaces and bedrooms. The VANTAGE® window and door system enables flexibility in design, which has allowed for large fixed windows to provide unobstructed views of the surrounding landscape.

This modest house is a reflection of the adventurous architect / builder / client. Rich in exploration, the Southern Outlet House challenges expectations of what can be achieved on a highly visible, regional domestic site.

This home has received a national commendation in the 2014 National Architecture Awards for Residential Architecture – Houses (New).

## **VANTAGE® SERIES 542 D'STACKER SLIDING DOOR**

- × High water resistance of 300Pa allows these doors to be installed into most residential locations.
- × This door can be fabricated as a multi panel stacker with clean flat sill where all unwanted recess are closed off with snap-on fillers. We have a stacking screen door system to go with the glass doors.
- × Door panels can be glazed with thick or insulating glass. We have dedicated stiles for glass up to 16mm thick and an inlay adaptor to accept 20mm Insulating glass units.
- × A large variety of locks are available including multi-point mortice lock. The extra strong door stiles allow oversized door panels to be fabricated.
- × Heavy door panels can be fitted with double bogey wheels for smooth long term operation. Running rails can be replaced in the future if necessary.
- × Flat external fillers create a clean closed off frame appearance. On the sill the infills guide water away from the door panels and improve water resistance.

Tasmanian owned and operated, Glass Supplies have been trading since 1960. During this time, Glass Supplies have become one of the State's leading aluminium window and door fabricators, providing quality and service second to none. The team at Glass Supplies are ready to assist you in selecting the ideal aluminium window and door systems for your project.
