ICON™ | Flush Pull Recessed Flush Pull

Key Features

- This is an alternative to a sliding door handle and offers a more understated look. Internal corners of the pull are rounded to soften the aesthetics. A mortice lock with hook bolt is fixed separately and is activated by key or interior turn knob in a rectangular base.
- Available in 316-grade stainless steel only.

ICON™ Flush Pulls are recessed into the door stile giving a lowline flush appearance. The pull projects only 2mm above the face of the stile.

When using ISEO™ mortice lock on residential doors we can match the 2mm thick pull handle face plate with 2mm thick escutcheons.

The escutcheon is secured to door stile with thin double side tape.
